                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δ
          The present sequence represents a human protein with heparanase cataly activity. The heparanase (hpa) polynucleotide is useful in gene therapy particularly in treating tumour, inflammation or autoimmunity. Particularly, the polynucleotide is useful in modulating the bioavailability of heparin-binding growth factors, cellular responses the partin-binding growth factors (e.g. bfGF) and cytckines (e.g. interleukin (IL)-8), cell interaction with plasma lipoproteins, cellular susceptibility to certain viral and some bacterial and protozoa infections, or disintegration of neurodegenerative plaques. The polynucleotide is also useful in wound healing (e.g. thermal, chemical radiation burns), and in the treatment of angiogenesis, restenosis, atherosclerosis, inflammation, neurodegenerative diseases (Gerstmann-Strausseler Syndrome or Creutzfeldt-Jakob disease), and some viral,

CC The present invention describes genetically modified cells (A) containing CC a polynucleotide (I) that encodes a polypeptide with heparanase activity. CC and express recombinant heparanase (II). Heparanase cleaves heparan CC sulphate (HS) at specific intrachain sites, resulting in release of the parin-binding growth factors, enzymes and proteins that are sequestered by HS in basement membranes, extracellular matrix or cell surfaces. It CC may also be implicated in tumour angiogenesis and metastases. (II) is CC potentially useful in wound healing and for treating angiogenesis, createnosis, atherosclerosis, inflammation, neurodegeneration, viral CC infection and cystic fibrosis. It can also be used to neutralise heparin CC (an alternative to protamine) and to screen for specific inhibitors (potentially useful for treating cancer and metastases). Antibodies CC raised against (II) are used for immunodetection and diagnosis of CC micrometastases, autoimmune lesions and kidney failure. (A) provide (II) can large quantities, in a form that is homogeneously processed and CC activated/neutralised by a dedicated protease. The present sequence

CC acti
CC Cellic The specification describes a polypeptide having heparanase (hp) activity. The recombinant protein is used as a modulator of heparin-binding growth factors, cellular responses to heparin-binding growth factors and cytokines, cell interaction with plasma lipoproteins, cellular susceptibility to viral, protozoal and bacterial infections or disintegration of neurodegenerative plaques. Heparanase may be useful for

Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.
